## **FLEXIBLE, SECURE AND FUTURE-PROOF HOME AUTOMATION**

Welcome to the Simplicity Revolution

Switch Automation is a flexible and cost-effective home automation system using revolutionary technology to make life less complicated for home owners.

Switch allows you to control your home from a simple touch screen interface, which is designed for anyone to use.

Unlike other automation systems, Switch's platform is completely open-standards and hardware neutral, meaning it won't become obsolete as technology evolves.

We also offer a unique solution for energy monitoring and management, helping you to reduce your household energy bills and environmental footprint.

### **FLEXIBLE**

A key point of difference between Switch and its competitors is in the flexibility of our platform.

Most importantly, it's hardware neutral, meaning you don't face restrictions when building or renovating your home, or upgrading your television or stereo equipment.

Our technology also allows you to control your home from single or multiple touch screens, third party remote controls, and mobile devices such as the Apple iPhone or iPad. In fact, with remote access possible from any web browser, you don't even need to be at home to make sure the lights are on, view cameras, or unlock the door for the kids when they get home from school.

Switch also goes further than alternative automation systems, integrating aspects of your home such as irrigation, water management and energy monitoring.

### **FUTURE PROOF**

By choosing Switch Automation, you're preparing your home for future technological change.

More than other automation companies, we understand the rapidly changing nature of the home technology landscape. By using IP connectivity as the foundation of all our automation systems, we can guarantee that as the technology in your home evolves, your Switch system will evolve with it.

Switch's platform is truly open-standards, offering a pathway for future upgrades and updates, as well as additional functionality and expandability. For example, Switch Automation systems are tested and compatible with FTTH (Fibre to the Home) that will increasingly provide our TV, data and voice services.

## SECURE IN THE CLOUD

Another reason to choose Switch over alternative systems is because of its innovative cloud-based model of automation. Unique to Switch, our cloud services allow homeowners to back up private digital content to the Internet, protecting your digital photos, data and other important information in the event of fire, flood or burglary. This also means you're not responsible for hosting or maintaining your system on a home server, as all settings and data are stored on the internet.

## GREENER HOMES

The value of making your home greener and more energy efficient is significant, including lower utility bills, greater market value and a healthier living environment.

However, being truly green means understanding exactly how, when and where your home uses energy and getting such detailed information can be difficult.

Switch Automation makes it easy to monitor and record your energy usage by room or device, and to the hour, minute and second of the day. It can also pull in real-time environmental information from local weather stations, making reporting highly accurate.

Using this data, you can pinpoint exactly how to tune your home to run at its most efficient, and over time your home will learn how to use less energy.
