

FOR IMMEDIATE RELEASE

SERIES 8 – INTEGRATED ENTERTAINMENT

Sydney, May 4, 2009

Award winning control solution manufacturer Switch Automation has released their integrated entertainment modules to compliment the Switch Entertainment line of products – Switch MRA (multi room audio) and Switch TV (integrated digital TV).

The Switch MRA module includes streaming internet radio of up to 30,000 internet radios stations and the ability to access and stream MP3 and WAV files from iTunes and WMP (Windows Media Player) libraries. As a true multi-room audio solution, multiple music tracks or playlists can be selected for simultaneous listening throughout the residence.

Switch Automation's MRA solution does not require a dedicated multi-channel power amplifier and connects to a standard IP network, streaming quality music from a Switch Automation server. A range of Switch Automation interactive interfaces including in-wall touch screens, wireless web tablets, Phillips Pronto and browser based devices provide complete control of the multi room audio system.

Switch Automation Network Music Players feature a 2 x 25 Watt, class D amplifier to directly power a pair of speakers. Alternative RCA line level output is provided with an optical SPDIF output for connection to home theatre amplifiers and receivers.

Switch Automation's 15" interactive in-wall touch screens have been upgraded to provide the ability of viewing digital television within a separate window or full screen as an option. Control of the digital television is provided by on-screen buttons allowing direct channel access of favourite channels.

Switch Automation has an underlying philosophy of integrating innovative technology using IP and open standards. Together with a range of interactive touch screens and integrated entertainment servers, a range of VoIP based IP intercom solutions leverages widely used and fully scalable technology capable of video and voice communications over local ethernet or the internet.

Switch Automation's solutions are designed for residential, business and hospitality including multi-residential apartments, gated communities and hotels.

ABOUT SWITCH AUTOMATION

Switch Automation specialises in the design, development and production of automation control solutions for residential, commercial, industrial and multi-dwelling applications.

Switch Automation products feature state-of-the-art technologies built on open standard, internet enabled architecture using simple structured cabling ensuring your project is completely future proof. With a wealth of experience, Switch Automation is the system of choice for supplying a completely integrated solution for a wide range of applications.

Switch Automation is a CEDIA (Custom Electronic Design and Installation Association) member and are proud to have developed systems that have been recognised by our industry for quality and innovation including the 2007 & 2008 Smarthouse Best of the Best awards for Best Automation System and Best Management System.
