

FOR IMMEDIATE RELEASE

SWITCH AUTOMATION FEATURES AT TENNYSON REACH BY MIRVAC

Sydney, October 10, 2008

Switch Automation is proud to be supplying the Tennyson Reach project by Mirvac with automation, entertainment, communications and energy management products.

Michael Pereira from Klenner Murphy Electrical, the electrical contractor for the project says:

"Klenner Murphy Electrical has contracted Auztech Industries to install the Switch Automation solution into the Mirvac Tennyson Reach project. The requirements of the project were to provide lighting control, intercom, energy management, music library and music distribution into thirty-one apartments and intercom into all 115 apartments. The Switch Automation solution meets these requirements."

Each of the four entry doors will feature Switch Automation's IP-Touch intercom door station. Patent pending, the revolutionary IP (Internet Protocol) intercom door station enables full 2-way communication to any SIP (Session Initiation Protocol) enabled voice and video enabled device. All Switch Automation products are capable of carrying voice and video including our range of interactive touch screen displays and VoIP (Voice over Internet Protocol) handsets.

Using the latest projective capacitive technology, the IP-Touch intercom is operated through a glass panel which when designed to complement the project becomes an integral component of the building design. The IP-Touch user interface is fully customisable presenting residents and guests with an interactive touch display to contact the intended recipient.

In conjunction with Switch Automation's range of interactive touch screens and VoIP enabled handsets the IP-Touch provides a complete solution that can be scaled to any size for many applications including multi residential apartments and business.

Switch Automation has an underlying philosophy of integrating innovative technology using IP and open standards. Together with a range of interactive touch screens and integrated entertainment servers, a range of VoIP based IP intercom solutions leverages widely used and fully scalable technology capable of video and voice communications over local ethernet or the internet.

ABOUT SWITCH AUTOMATION

Switch Automation specialises in the design, development and production of automation control solutions for residential, commercial, industrial and multi-dwelling applications.

Switch Automation products feature state-of-the-art technologies built on open standard, internet enabled architecture using simple structured cabling ensuring your project is completely future proof. With a wealth of experience, Switch Automation is the system of choice for supplying a completely integrated solution for a wide range of applications.

Switch Automation is a CEDIA (Custom Electronic Design and Installation Association) member and are proud to have developed systems that have been recognised by our industry for quality and innovation including the 2007 & 2008 Smarthouse Best of the Best awards for Best Automation System and Best Management System.
